

# Food Chain and Food Web Project

- ❖ Use this project to teach children about food chains and food webs.
- ❖ Children color one of the three food chains and cut on the lines.
- ❖ Children glue, tape or staple strips into circles, attaching them in order.
- ❖ Children can display food chains separately, or create a food web by finding animals on one chain that eat animals on another, or demonstrating how the animal at the top of each food chain may eat some of the lower items as well.
- ❖ Point out that each food chain begins with the sun, then a plant, then a herbivore. All links after that are omnivores or carnivores.

Food Chain/Web: Rubric

- 
- Assembled chain in order /25
  - Finished on time /25
  - Class discussion /25
  - Artistic effort /25
